REGION OF YORK
CLERK'S OFFICE

FILE No. -

September 3rd 2004

To whom it may concern

Re the assessment that was performed by Inspec-Sol copy enclosed.

I would like to know what could be done re the shortage of water in my pond and no over flow from my well.

This started to dry up last summer <2003>

I have enclosed photos before and after so you can see the difference.

I have many many tall reeds on the pond now which I never had before and also the oxygen levels are next to zero I had 24 koi in the pond which I put in a few years ago and they were huge, up until this year when they all died because of lack of oxygen I also had many large mouth Bass and they have all died too.

My pond is about approx ½ acre in size and runs form the back of my house to the front of my house.

Obviously something has happened to the water table in this area and I would like to know what York Region can or are prepared to do to alleviate this problem.

Please advise at your earliest convenience

Regards

Doug Pike
