

6

YORK REGION AGRICULTURAL/RURAL REVIEW - LEAR STUDY GREENBELT CONFORMITY

The Planning and Economic Development Committee recommends:

- 1. receipt of the communication from C. Milani, land owner, City of Vaughan dated September 8, 2009; and**
- 2. adoption of the recommendations contained in the following report dated August 28, 2009, from the Commissioner of Planning and Development Services.**

1. RECOMMENDATIONS

It is recommended that:

1. The Land Evaluation Area Review (LEAR) Study Report and mapping, undertaken by Planscape on behalf of York Region, and appended to this report as *Attachment 2* be confirmed as a background report to the Draft York Region Official Plan – June 2009.
2. The Regional Clerk circulate copies of this report, and the LEAR Study Report and Mapping to the Ministry of Municipal Affairs and Housing, the Ministry of Agriculture, Food and Rural Affairs and the Ministry of Energy and Infrastructure.
3. Staff report back to Committee and Council on the public input, comments received and any changes recommended to policies of Chapter 6 and Map 8 of the Draft York Region Official Plan at the November 4, 2009, Planning and Economic Development Committee as part of the overall report back on the Draft York Region Official Plan.

2. PURPOSE

This report:

- Provides information on the results of the Agricultural/Rural Review (Land Evaluation Area Review) Study undertaken to provide background information for the Regional Official Plan Update.
- Recommends that Committee and Council confirm the LEAR Study Report and Mapping, undertaken by Planscape on behalf of the Region of York, as a background report to the Draft York Region Official Plan – June 2009.

3. BACKGROUND

Agricultural/Rural Review (LEAR) Consultant retained in early 2009 and Region's Agricultural Advisory Liaison Group as well as local municipal and Provincial representatives acted as Steering Committee for the Study

Regional Council at its meeting of February 21, 2008 endorsed Clause 10 of Report 2 of the Regional Planning and Economic Development Committee which recommended the work plan for bringing the Regional Official Plan into conformity with the Provincial Greenbelt Plan. As part of the work plan, background studies included an Agricultural/Rural Review (LEAR) to assist in updating the Agriculture/ Rural land designations in the Regional Official Plan.

The Agricultural/Rural Review (LEAR) was commenced in January 2009 after a competitive bid process conducted in accordance with Purchasing By-Law No. A0352-2004-089. The upset limit of the study identified in the Request for Proposal was \$60,000 and the winning bid was under this amount at \$59,766.00. A copy of the Study Terms of Reference from the Request for Proposal document is appended as *Attachment 1* to this report.

Three planning firms provided proposals with the firm of Planscape, Margaret Walton, Principal and the Soil Resource Group, Dr. Greg Wall, Principal, the successful bidder. These two firms have undertaken LEAR assessments for other municipalities and Ms. Walton's firm is heavily involved in agricultural studies for other GTA municipalities (including Halton Region and the Town of Markham), the GTA Agricultural Action Committee and the Holland Marsh Growers Association.

The Study process, the role of the Steering Committee and the outcomes are discussed in Section 4 of this report

4. ANALYSIS AND OPTIONS

A LEAR Study allows other factors in addition to soils capability to be considered in the identification of Agriculture and Rural lands

LEAR (Land Evaluation Area Review) is an alternative assessment technique, developed by the Provincial Ministry of Agriculture Food and Rural Affairs (and based on assessment techniques from other jurisdictions) to permit some flexibility in the identification of agricultural lands based on local factors. In addition to Canada Land Inventory (CLI) soil capability to identify prime agricultural lands in a municipal context, a LEAR evaluation allows other physical and social-economic factors such as drainage, slope, size of property holding, farm infrastructure, ownership, conflicting uses and current production all based on local situations to be considered.

The 1994 Regional Official Plan identification of Agriculture and Rural lands on Map 6 was based on CLI classes 1 to 4, as well as those lands of classes 5 to 7 in production. Specialty Crop lands were also identified on the map. All of which was consistent with the Provincial Policy Statement and Foodland Guidelines in place at that time.

The Provincial Government undertook a LEAR analysis as part of the background work to the Greenbelt Plan.

There are two parts to a LEAR evaluation: the Land Evaluation (LE) and the Area Review (AR).

The LE factors score the area's physical characteristic for agriculture. Factors that may be used in this portion are soil capability, slope and drainage.

The AR factors are more diverse and relate to the socio-economic conditions that influence the suitability of an area for agriculture.

The factors to be considered in each Study are to be determined by the Steering Committee, with the assistance and advice of the consultants based on local situations.

LEAR Steering Committee provided valuable input to the choice of criteria, feedback on MPAC property codes for conflicting land uses, codes for agricultural production and the process used to arrive at preliminary results

Part of the strength of a LEAR study (and a requirement of the Provincial guidance on such studies) is the input provided to the process by local knowledge.

In 2001, the Region formed the York Agricultural Advisory Liaison Group (YAALG) with a mandate to:

- a) Solicit issues and concerns of York's farming industry, agricultural organizations, community groups and rural citizenry and make appropriate recommendations.
- b) Assist Regional Council in implementing Regional and area municipal official plan policies and programs, and provincial legislation related to farm practices and, at the request of Council, act as interim arbitrator on local nuisance complaints.
- c) Provide input on how agricultural and rural issues can be incorporated into goals and objectives in the review of official plan policies.
- d) Provide a forum for the exchange of information on agricultural and rural issues and initiative and to advise on potential concerns.
- e) Encourage public awareness and education of agricultural and rural issues.
- f) Review studies, plans and proposals, as required by Provincial legislation, or as may be referred by Regional Council/ Staff and provide comments on agricultural and rural impacts.

- g) Provide comments and recommendations on legislation, programs and funding from Provincial departments and other agencies that affect agricultural and rural issues in York.

The Agricultural Advisory Liaison Group generally meets twice to three times a year, with a number of members also active on the GTA Agricultural Action Committee as well as farm organizations in the GTA. In October 2008, the Agricultural Liaison Group agreed to act as the Steering Committee for the Agricultural/Rural Review (LEAR). This core group of farmer and farm organization representatives was augmented by several additional farmer representatives as well as local municipal planning representatives and Provincial representatives from the Ministry of Municipal Affairs and Housing and Agriculture, Food and Rural Affairs.

This Steering Committee, Regional staff and the consultants met four times between February 19, 2009 and May 6, 2009 to decide on criteria to be used in the LE and AR analysis, review preliminary results of the consultants work and give direction on thresholds and direction relating to the Study. Municipal and Provincial representatives also met an additional three times to discuss thresholds for LEAR scoring that would prove acceptable to the Province and the Region and local municipalities, review preliminary results and provide planning input to Regional staff on the Agricultural and Rural designations shown on Map 8 to the Draft Official Plan.

Preliminary LEAR Results yield not unexpected pattern of agriculture and rural land uses and assist in deciding on Agricultural and Rural land use designations in the Draft Regional Official Plan

At the March 24, 2009 meeting, the Steering Committee reviewed and decided upon the factors to be assessed as part of the LE and the AR portions of the Study, determine the standard evaluation unit to be lots and concessions and consider the weighting to be associated with each factor and the overall LE and AR. The factors chosen were CLI soils information for the LE and fragmentation within the evaluation unit, conflicting land uses within 1 km of the evaluation unit and current production as the AR factors. The overall LE scores are shown on Figure 1 attached. The overall AR result is appended as Figure 2.

Following the individual factor scores, weighting was applied consistent with the provincial direction for undertaking LEAR evaluations and Steering Committee direction which resulted in the LE scores forming 65% and the AR forming 35% of the final LEAR score. The draft LEAR results are shown on Figure 3 to this report.

The draft LEAR was undertaken for all lands in York Region outside of Urban Areas, Towns and Villages and hamlet designations, including lands that are not currently within the Oak Ridges Moraine Conservation Plan or Greenbelt (“white belt”). The LEAR assessment included “white belt” lands because they form some of the highest scoring LEAR results and not all white belt lands are required for urban development in the 2031 planning horizon.

For lands in the white-belt that may be required for urban development within the 2031 horizon, it is important that the Region and local municipal planning documents and strategies retain agricultural production for as long as possible. When the Urban Area boundary is finalized in Markham, Vaughan and East Gwillimbury, areas within the boundary will be deleted from the Agricultural Area designation. In white-belt areas beyond the 2031 horizon, agricultural production will be the primary land use for the longer term, consistent with areas within the larger Greenbelt.

From LEAR results to land use Designations on Map 8 of the Draft Region of York Official Plan

The results of a LEAR Study are only part of the input to refinement of the Agriculture and Rural Policy Area Map in the Draft Regional Official Plan. In addition to the LEAR results is the grouping of like LEAR scores into land areas generally with a minimum area of 250 hectares. In the Province’s estimation this magnitude of land area generally represents a critical mass of land sufficient to support an ongoing agricultural base and meets the criteria to be a prime agricultural area as defined in the Provincial Policy Statement.

Local municipal and Provincial representatives also reviewed this information against:

- The Province’s mapping of remaining provincially significant agricultural areas and Specialty Crop areas (which are not assessed using a LEAR Study) in the Region
- Local municipal official plan designations where those municipal designations were approved after 1994
- Local municipal land uses and municipal expectations as determined within Official Plan documents
- The designation of the lands within the Oak Ridges Moraine Conservation Plan and Greenbelt Plans (which are very restrictive of land uses other than Agriculture and related uses in the majority of their land use designations)
- The presence of key natural heritage features that would limit the potential for lands to be brought into Agricultural production

Based on these factors, Map 8 of the Draft Region of York Official Plan was refined for inclusion in the document and public review and comment. A copy of proposed Map 8 from the Draft York Region Official Plan – June 2009 is attached as Figure 4.

Future Directions for an Evolving Agricultural Industry

Statistics Canada undertakes a Census of Agriculture on the same 5-year period as the wider Canadian Census. *Attachment 2* contains a more comprehensive comparison of agricultural statistics relating to York Region. However, comparison between the 2006 Census of Agriculture and previous years reveals ongoing changes in the agriculture industry in York Region.

At a broad level this statistical summary indicates an industry under continuing pressures in an urbanizing area. Regardless of these challenges, gross farm receipts are higher than the 2001 census period and the farm industry has shown initiative in establishing a number of action committees, including the GTA Agricultural Action Committee and the Holland Marsh Growers Association. Discussions with farmer members of the Region's Agricultural Advisory Liaison Group indicate a highly resilient industry that has adapted its practices to changing circumstances, remaining a viable and vital component of the Region's economy. Regional and local municipal policies and strategies, as well as Provincial and Federal policies should be directed at supporting the industry and its contributions to local food production and the economy of the Region and Province.

The Draft York Region Official Plan – June 2009 includes policies to protect Agricultural lands in the Region, to encourage local food production supports agriculture and creates circumstances that will maintain agriculture in the white belt until such times as the land is required for urban expansion.

Further Draft Official Plan policies are directed to monitoring the effectiveness of the Regional Plan and Regional involvement in enabling the industry to access changing markets.

Next Steps

The results of the LEAR Study form background documentation to the Agricultural and Rural designations shown on Map 8 of the Draft York Region Official Plan – June 2009.

The Draft Official Plan is currently being reviewed by circulated agencies and the general public and will be the subject of a number of public information sessions and an open house in September, 2009. Regional staff is fully prepared to discuss this Study as part of the public consultation on the Draft Official Plan. As well, a meeting of the LEAR Steering Committee including municipal and Provincial representatives has been scheduled for September 10, 2009 to review and confirm the results of the LEAR Study.

The Study has been posted on the Region's website as part of this Planning and Economic Development Committee agenda and is therefore available for viewing or downloading. Additional copies of the final study can be made available on request.

Relationship to Vision 2026

Many of Vision 2026's goals compliment and support the *Greenbelt Act, 2005* and Plan including the action areas under Quality Communities for a Diverse Population; Enhanced Environment, Heritage and Culture; A Vibrant Economy; Managed and Balanced Growth; and, Engaged Communities and a Responsive Region.

Protection of Agricultural lands is one of the action areas under Enhanced Environment.

5. FINANCIAL IMPLICATIONS

The LEAR Study was undertaken within the 2009 Planning and Development Services budget allocations as was work on the Draft Region of York Official Plan – June 2009.

6. LOCAL MUNICIPAL IMPACT

Local municipalities were invited to participate on the LEAR Steering Committee and the majority sent representatives from the Planning Departments. Local municipalities were engaged and supportive of the Study.

Several local municipalities are undertaking their own agricultural reviews as part of their Official Plan updates exercises and all municipalities interested in finding ways to ensure the longevity of the agricultural industry. The results of the LEAR study can be used by local municipalities in undertaking their Greenbelt Conformity exercises.

7. CONCLUSION

Regional Council in March 2008 authorized Regional staff to undertake an Agricultural/Rural Review (LEAR) Study as part of the Greenbelt conformity exercise. A review of the Agricultural and Rural land base through improved evaluation techniques such as a LEAR Study as well as review of policies and changes in the agricultural industry are all important components in updating the Regional Official Plan.

The study was started in February 2009 after retention of the planning company Planscape and the Soil Research Group. In order to provide local input, required by the provincial guide for conducting LEAR studies, a Steering Committee made up of the Region's Agricultural Advisory Liaison Group, several additional farmer representatives and local municipal and Provincial representatives was convened.

The results of the LEAR Study will be reviewed with the Study Steering Committee, but the pattern of agriculture is consistent with the landforms and settlement in the Region. The LEAR results have been used as background in the preparation of Map 8 Agricultural and Rural Areas of the Draft York Region Official Plan – June 2009.

Review of the LEAR Study as a Regional Official Plan background study will proceed at the same time as review of the Draft York Region Official Plan. Comments submitted on the LEAR Study as part of the background information will be reported on in November, at the same time as the balance of the Draft Official Plan document.

For more information on this report, please contact Barbara Jeffrey, Manager Land Use Policy and Environment at (905) 830-4444, Ext. 1526.

The Senior Management Group has reviewed this report.

(The two attachments referred to in this clause are attached to this report).

Subject: Planning and Economic Development Committee Meeting Agenda Item #6 - LEAR

Mr. Kelly,

Please include this email and the attachments for the above noted item on Planning Committee for tomorrow.

We are the owners of 260 acres of land located on the attached mapping. They include Parts of lots 30 & 31 Concession 2, City of Vaughan.

We reviewed the attached spreadsheet for scoring of LEAR and seem to be in some disagreement as to how the numbers were calculated. For example, Lot 31 and 30 as highlighted should have very similar conflict scores and production scores, which should all be very low as we have many residential units and a gravel pit, which all serve to lessen the scores.

Further, the production hectares cannot possibly be as high as indicated as this area is very wooded and has very little topsoil due to it being on the oak ridges moraine.

The LEAR map as attached does not reflect the numbers 2.8 and 2.57 as per the attached spreadsheet.

Lastly, we do not wish to be part of any new more restrictive policies whatsoever including, but not limited to, any new Agricultural policies.

Cam Milani

Proposal:	P-08-106
Description:	York Region Agricultural/Rural Land Review
Closing Date:	Friday January 16, 2009
Closing Time:	1:00 p.m. (Local Time)

4 TERMS OF REFERENCE

4.1 Background

Within the Region of York, the Greenbelt Plan covers lands within the Oak Ridges Moraine (which remain subject to the policies of the Oak Ridges Moraine Conservation Plan and Regional and local conformity amendments) and lands designated as Protected Countryside. Approximately 69% of York Region is subject to the various policies for the Greenbelt Plan's Protected Countryside designation and the Oak Ridges Moraine Conservation Plan policies. Previous reports to Committee and Council have identified the detailed policies of the Greenbelt Plan.

One of the key elements of the Region's Greenbelt Conformity Work Plan as part of the Region's growth management work includes a review for any necessary Agricultural/Rural Designation refinements both within and outside the Greenbelt.

In 2006, the Growth Plan for the Greater Golden Horseshoe identified lands, in Markham, Vaughan and East Gwillimbury located outside of the current settlement boundaries and the defined boundaries of the Greenbelt and Oak Ridges Moraine as lands potentially available to accommodate a portion of the forecast urban growth. These lands referred to as "White Belt lands" and are primarily designated as Agriculture and Rural Policy Areas in the Region's Official Plan.

The Growth Plan for the Greater Golden Horseshoe forecasts 2031 population and employment for York Region of 1.5 million people and approximately 800,000 jobs. While 40th of the growth to 2031 will be located in existing built-up areas of the Region, a portion of the White Belt lands in all three communities will be required for urban uses before 2031. Decisions regarding the future of agriculture and rural lands will need to be made, including: potential interim use of "whitebelt" lands that may be identified for growth to the 2031 planning horizon; the function and use of agricultural/rural lands in the White Belt not required for growth before 2031 and, the nature of agriculture within these areas.

The study of Agricultural/Rural lands in York Region must also be undertaken within the context of the need for lands to supply local food to ensure food security in a rapidly urbanizing area.

4.2 Objectives, Scope and Purpose

The Region is seeking a consultant to assess the compliance of the current Agricultural Rural designation of the Regional Official Plan against current standards and update to the designations of the Regional Official Plan. This reassessment ideally would utilize the Provincial LEAR methodology to assess agricultural and rural capability unless, in the opinion of the consultant, Regional staff and the Provincial Ministries such a LEAR assessment is not required to provide update designations.

The following tasks must be met in this project:

1. Examine the Ontario Ministry of Agriculture, Food and Rural Affairs (OMAFRA) LEAR mapping for the Region (including lands outside of the Greenbelt but within the White Belt of Vaughan, East Gwillimbury and Markham) and confirm the accuracy of the mapping and LEAR ratings through ground-truthing, ortho photography, and/or discussion with the York Region Agricultural Liaison group;
2. Compare the Provincial LEAR identification against existing Regional and Local Official Plan Agriculture and Rural designations and the Regional property fabric using GIS techniques for basic analysis. Identify areas of gaps or discrepancies between the Province's LEAR mapping and Regional and Local Official Plans;
3. Based on the results, analysis and comparisons of task 2, determine whether a more detailed LEAR assessment is required to revise the Agricultural/ Rural identification in the Regional Official Plan to comply with the requirements of the Provincial Greenbelt Plan and provide guidance to local

Proposal:	P-08-106

Closing Date:	Friday January 16, 2009
Closing Time:	1:00 p.m. (Local Time)

municipalities regarding redesignation of Agricultural and Rural lands, as part of local Greenbelt Conformity exercises.

4. If a LEAR is indicated:

- Determine factors/variables to be considered within a LEAR for Agricultural and Rural land within the Region and review and confirm their respective weighting with the Region and Local Area Municipalities and the York Region Agricultural Liaison Group and Provincial Ministries.
- Provide recommendations for the redesignation of any Agricultural and Rural lands at the Regional level; based on the updated LEAR evaluation

5. If a LEAR is not required, provide a rationale for this conclusion and make recommendations for the redesignation of any Agricultural and Rural lands at the Regional level;

During the course of the Study, the consultant will also be responsible for assessing the feasibility of retaining a viable agricultural presence within the White Belt lands of the Region, and if so, provide direction on how to achieve sustainable agriculture and local food production or other competitive uses for lands that may not be required for Growth purposes before 2031 and beyond 2031.

6. Undertake a maximum of 8 meetings to be divided between internal project team meetings with Regional staff and meetings with various stakeholders (i.e. Municipalities, York Region Agricultural Liaison Group, Provincial Ministries and others) to obtain input on projects results and/or conclusions and comments on the proposed designation changes;
7. Provide the draft and final study report and updated spatial data layers for Regional project staff before the project deadline. In the case of spatial data layers, compliance to technical specifications provided by the Region as well as adherence to Regional Quality Assessment standards will be required before final product acceptance.

4.3 Timeframe

The study is to commence at the latest by the beginning of February 2009 and be completed by the end of April, 2009 or earlier.

4.4 Budget

The upset budget limit for this project is \$60,000 inclusive of GST.

4.5 Qualifications

Consultants responding to the York Region Agricultural Land Review shall demonstrate expertise in the following areas:

- Undertaking an Agricultural Land Review and Land Evaluation and Area review, land use policy matters and stakeholder consultation.
- GIS capability for data analysis during project timeframe compatible with Regional GIS systems and submission of spatial data to meet Regional Quality Assessment standards.
- Proven ability to facilitate stakeholder and public consultation specifically related to agricultural and rural issues.
- A proven record in managing projects at this scale and delivering a process on schedule with successful results.

Proposal:	P-08-106
Description:	York Region Agricultural/Rural Land Review
Closing Date:	Friday January 16, 2009
Closing Time:	1:00 p.m. (Local Time)

- Demonstrated ability in providing expert opinion evidence at the Ontario Municipal Board or Environmental Assessment Board if required. The consultant will be expected to appear, in support of or on behalf of, the Region at any Ontario Municipal Board hearings, meetings with public agencies, landowners or the general public, however, the costs of additional OMB attendance and preparation is outside of the costs associated with this consulting contract.

4.6 Information to be Provided to the Successful Bidder

4.6.1 Study Data and Information provided by York Region

The following reference materials are available for review at the Region and will be provided to the consultant selected to undertake the study:

- Region of York Official Plan, 2008 Consolidation
- Region of York Significant Woodland Study, 2005
- State of the Environment Report, 2005
- Growth Plan for the Greater Golden Horseshoe Area
- Clean Water Act, Lake Simcoe Protection Act, 2008
- Greenbelt Act and Plan
- Rouge Watershed Plan (2007), Duffins Watershed Plan, TRCA, (2003), Humber Watershed Plan 2008
- Rouge North Management Plan (2001)
- GTA Agricultural Action Plan
- Other studies and documents appropriate to the study review.

The following digital files are available from the Region for analytical work and will be provided to the consultant selected to undertake the study:

- Regional Official Plan schedules and data layers
- Local area municipal Agricultural and Rural Official Plan designations (where available in digital form)
- Wellhead protection Areas
- Provincial LEAR assessment for the Region
- Greenbelt Plan mapping
- Oak Ridges Moraine mapping
- Orthophotography (2007) for areas as identified by the consultant
- Region of York property Fabric as required.

Should additional spatial information be identified by the consultant as required for the successful completion of the project, Regional Project Manager and Geomatics Branch staff will assist in acquisition of the data, subject to financial limitations.

4.7 Deliverables and Acceptance

4.7.1 Deliverables to the Regional Municipality of York

On completion of the study, two main deliverables are required:

- Draft and Final report detailing the methodology chosen for the Study including recommended changes to the Agricultural and Rural designations of the Regional Official Plan, including a full explanation of the rationale used in arriving at the Study conclusions And recommendations on how to achieve sustainable agriculture and local food production or other competitive uses for lands that may not be required for Growth purposes before 2031 and beyond 2031.

Proposal:	P-08-106
Description:	York Region Agricultural/Rural Land Review
Closing Date:	Friday January 16, 2009
Closing Time:	1:00 p.m. (Local Time)

- Mapping and final GIS Agricultural and Rural designation data layers, acceptable to Regional Project Manager and Geomatics Branch staff, for the Agricultural and Rural designations for the Region's Official Plan including detailed description and methodology for development of mapping.

4.7.2 Reports and Presentation Materials

All study reports and presentation materials are to be supplied to the Region in a format compatible with Microsoft Office Suite 2003 (Word, Excel, Access and Powerpoint),

4.7.3 Spatial Data

Spatial data provided to the Region should be in an ESRI geodatabase format. Other formats can be provided upon consultation with Regional Project Manager and Geomatics Branch staff.

The data should have the following:

- a spatial reference with a coordinate system of NAD 1983 UTM Zone 17
- spatial domain with:
 - minimum X: 500000
 - maximum X: 21974836.45
 - minimum Y: 4770000
 - maximum Y: 26244836.45
- precision: 100

The data should be topologically correct. As a minimum there should be no overlaps and no gaps in the topology of polygon features (areas of no data excepted). Linear features should not have dangles, self intersect or self over lap. Other topology rule implemented should use current York Region corporately available data as a base.

Metadata will be provided with all data. The metadata will include an abstract, purpose and process steps used to create the data. Attribute field definitions will also be provided. Metadata should be provided attached to the GIS but can be provided in a separate document if attachment is not technically possible.

4.7.4 Quality Assessment and Acceptance of Deliverables

York Region will perform Quality Assessment of the spatial data deliverables, for a period of 15 days from delivery to ensure that they meet the specifications, quality assurance and proposed requirements including, completeness of materials and adherence to specifications detailed above:

During the assessment and acceptance of deliverables period, York Region will contact the contractor to advise of any and all flaws in the delivered product. Remote access to early deliverables and QA tools would be useful.

THE REGIONAL MUNICIPALITY OF YORK

LAND EVALUATION AND AREA REVIEW

Summary Report

1 Introduction

The purpose of this report is to provide background information and describe the approach that was developed for a Land Evaluation and Area Review for York Region. The results of the LEAR are intended to inform the decision making process regarding current and future planning issues in York Region.

The LEAR System is a provincial evaluation process, developed to identify prime agricultural areas by inventorying lands with agricultural potential in contiguous areas. The results of the analysis aid in the development of local and provincial agricultural policies. This LEAR will identify prime agricultural areas in York Region, including lands inside the Greenbelt (including the Oak Ridges Moraine) and “White belt”, for consideration in the York Region Official Plan update. The LEAR evaluation does not assess muck or organic soils only mineral soils. In York, the muck soils in the Holland Marsh have been identified by the Province as a Specialty Crop Area. However no other specialty crop evaluation was done. At the time this study was done, there was no “evaluation procedure established by the Province”¹ to identify specialty crop areas and the addressing this requirement was outside of the terms of reference for the study.

A LEAR evaluation uses both physical and socio-economic factors to evaluate the potential for agriculture in a defined study area. Typically, the Land Evaluation (LE) component of a LEAR uses soil capability conditions to assess the productivity of the land. Soil ratings are based on the Canada Land Inventory Soil Capability Classification for Agriculture (ARDA, 1965). The Area Review (AR) component measures other important non-soil factors that may enhance or impede agricultural activities such as

¹ Provincial Policy Statement 2005, Ontario, definition of “Specialty Crop Area”.

installed infrastructure, fragmentation, adjacent lands currently in production, and proximity to conflicting land uses.

The LEAR System is designed to be flexible and sensitive to local objectives. This is achieved using input from local groups or a working committee to provide input into developing the system. In YORK Region, collaboration was achieved by consulting the York Agricultural Advisory Liaison Group (YAALG) augmented by several additional local farmers, local municipal planning representatives and Provincial representatives from the Ministry of Municipal Affairs and Housing and Agriculture Food and Rural Affairs. This Steering Committee provided extensive local knowledge regarding agriculture and guided the LEAR process by recommending suitable criteria and weights for York Region.

2 Previous LEAR Study Approaches

In 2002, the Ontario Ministry of Agriculture, Food and Rural Affairs (OMAFRA) produced a Guide to the Land Evaluation and Area Review (LEAR) System for Agriculture (OMAFRA, 2002). This guide explains the concept and framework of LEAR, but refers the selection of the evaluation unit, criteria, weighting and scoring used for LE and AR factors to groups at the local level.

Due to the requirement for LEAR studies to reflect local circumstances, the selection of suitable criteria must be tailored to the area's characteristics. Criteria are selected based on the character of the agricultural landscape as well as available technological data resources.

2.1 Evaluation Unit Comparison

Establishment of the Evaluation Unit (EU) is an important consideration as it forms the basis for data collection and is the geographic unit to which LEAR scores are applied. The EU influences the LEAR considerably, especially regarding proximity and adjacency operations for the Area Review. Table 3.1 illustrates Evaluation Unit examples for previous studies.

Table 3.1 – Evaluation Unit Used in Previous LEAR Studies

Provincial	Greenbelt	Hamilton	Ottawa-Carleton	Stormont, Dundas & Glengarry	Kingston	Halton
Ownership Parcels	Survey Lots Concessions	Ownership Parcels	Ownership Parcels	Ownership Parcels	N/A	Survey Lot Concessions

2.2 AR Criteria Comparison

Area Review criteria evaluate land use and socio-economic factors, which contribute to the suitability of an area for agricultural activities. Some factors cannot be used due to a lack of data resources while others may be considered insignificant because they are duplicated criteria. Table 3.2 illustrates the range of AR criteria used in a number of previous LEAR studies.

Table 3.2 – Area Review Criteria for Previous LEAR Studies

Provincial	Greenbelt	Hamilton	Ottawa-Carleton	Stormont, Dundas & Glengarry	Kingston	Halton
Percentage of Surrounding Lands in Agricultural Use 85-100% gets perfect score	Number of parcels within 300m of the evaluation unit 0 to 1 parcels gets perfect score	Proportion of agricultural land within 1km of each agricultural property	Percentage of Property within 305m of Conflicting Land Use 0% gets perfect score	Proportion of Surrounding Area (1km) in Agricultural Land Use 75-100% gets perfect score	Proximity to Incompatible Land Use – residential cluster = three or more residences within 300m of each other	Proximity to Conflicting Land Uses
Percentage of Evaluation Unit in Agricultural Use 85-100% gets perfect score	Number of parcels in the evaluation unit (Fragmentation)	Number of residential properties within 1km of each agricultural property	Percentage of Property in Agricultural Land Use 85-100% gets perfect score	Proportion of Parcel in Agricultural Land Use 75-100% of property in agricultural use gets perfect score	Percentage of each unit which is being used for farming >50% gets best score	Number of parcels in Evaluation Unit (Frag)
Parcel Size Greater than 36.4ha gets perfect score	Investment in tile drainage within evaluation unit Tile drainage gets perfect score	Number of properties within 1km of each agricultural property (exclude residential)	Parcel Size Greater than 36.4ha gets perfect score	Parcel Size Greater than 36.4ha gets perfect score		Farm Infrastructure (Secondary structures and outbuildings)

Provincial	Greenbelt	Hamilton	Ottawa-Carleton	Stormont, Dundas & Glengarry	Kingston	Halton
	Gross farm receipts per cropped acre >\$2500 gets perfect score			Investment in Tile Drainage Has tile drainage gets perfect score		
				Proximity to Conflicting Land Uses Parcels greater than 400m get perfect score		

2.3 Weighting of Factors

As previously indicated, the Land Evaluation (LE) component involves evaluating the study area's soil resources for agriculture. In contrast, Area Review (AR) looks at other (non-soil) conditions and practices that may influence agriculture. The weighting of the LE vs. AR factors is an important concern as it determines the importance of LE factors relative to AR factors. The LE component is often given higher weighting than the AR component because soil resources tend to be the most determinant factor in identifying prime agricultural areas and are generally "fixed" resources, not subject to economic or social factors. According to the Province's Guide to Land Evaluation and Area Review (LEAR) System for Agriculture, 2002, under no circumstances should the AR component be weighted greater than the LE component. The weightings can be adjusted by a municipality, provided justification exists to do so. Previous LEAR studies such as the Greenbelt LEAR used a LE:AR ratio of 65:35, while the Hamilton LEAR used a 60:40 ratio.

3 York Consultation and LEAR Customization

As stated previously, the framework of a LEAR has a consistent methodology; however, the selection of criteria and weights differentiates each LEAR study. The challenge in the York LEAR study was to select and implement an appropriate set of criteria and weights for York Region. As part of the Steering Committee, consultation was carried out with the YAALG, Ontario Ministry of Agriculture, Food and Rural Affairs (OMAFRA), the Ministry

of Municipal Affairs and Housing (MMAH), YORK Region and local municipal planning staff to develop and refine the most appropriate set of criteria and weights for the York LEAR.

3.1 Evaluation Unit Selection

As illustrated in Table 3.1, previous LEAR studies have used both ownership parcels and lot/concession polygons as the evaluation unit. In the Guide to the Land Evaluation and Area Review (LEAR) System for Agriculture, 2002, it is stated that land ownership parcels are well suited as evaluation units because they are small, resulting in detailed and accurate information. Although more detailed information is ideal, it has become apparent that data at the ownership level involves privacy issues which inhibit its use. In addition, soils data is not well suited to collection at the parcel level as this scale is too fine. As a result, lot/concession polygons are more appropriately used and have become the more standard unit of evaluation.

The York LEAR Steering Committee chose to use Lot/Concession boundaries to delineate the unit of evaluation. York Region's lot and concession fabric is reasonably consistent with the majority of Lots containing +/- 200 acres. Lot/Concession boundaries were found to define the most appropriate evaluation unit because privacy issues are avoided and study results can be easily compared and contrasted to the Province's Greenbelt LEAR. However, in conducting the AR analysis, property fabric was utilized extensively in calculating fragmentation and measuring the adjacency of conflicting lands and lands in production.

3.2 Land Evaluation and Area Review Factor Selection

As illustrated in Table 3.2 above, numerous evaluation variables exist for use as LE and AR criteria. Listed below are possible criteria which were presented to the Steering Committee for consideration. Using input from the Steering Committee the list was examined and the most significant factors were extracted for use in the York LEAR.

Table 3.3 – Potential LEAR Criteria

Possible LE Factors	Comments	Ranking	Yes/No
Drainage		4	N
Slope		3	N
Climate	See if there is distinguishing data	2	Y
Soil Type	Look at importance of Class 4 Stay with GB approach that ranked class 4 higher and closer to class 1-3	1	Y
Possible AR Factors	Comments	Ranking	Yes/No
Fragmentation (within evaluation unit)	Makes agriculture more difficult in fragmented areas but depends on type of agriculture	2	Y if correct weighting applied
Size of Property Holding	Established in Greenbelt Plan as 100 acres and 40 acres		N
Existing Farm Infrastructure	A lot of rented land will not have infrastructure, does not consider rental land		N
Ownership			Maybe
Connectivity to Greenbelt			N
Presence of Non-Farm Uses			N
Conflicting Uses (adjacent to evaluation unit)	Related to fragmentation Traffic is greatest issue moving equipment		Y if larger farming areas
Current Production	Weight to consider class 4	1	Y
Aggregate Resources			N
Area Required to Accommodate Growth			N
Natural Heritage Systems Requirements			N
Water Availability	Availability of water critical in specialty crop areas		N
Service Infrastructure (Farm Implement Dealers etc)	If no infrastructure then impacts use		N
Gross Farm Receipts	Difficult to obtain data – accuracy Need some way of tracking on a long term basis		N

The most appropriate LE and AR factors selected following a meeting with the York LEAR Steering Committee were:

- 1) Soils (Canada Land Inventory Soil Capability for Agriculture) (LE Factor)
- 2) Climate (LE Factor)
- 3) Fragmentation (AR Factor)
- 4) Lands in Production (AR Factor)
- 5) Conflicting Land Uses (AR Factor)

The Soil Research Group (SRG) was given responsibility for the LE factor analysis. Although both Soil Capability and Climate (expressed as heat units) were recommended by the Steering Committee, it became apparent that climate data, to differentiate the various microclimates in York (such as lake effect temperatures) was not readily available. As a result, SRG recommended that Climate as an LE variable be abandoned and that only the soil capability be used. For each evaluation unit, a CLI class was assigned to each soil component and an area weighted LE value calculated, based on the approach outlined in the Guide to LEAR. The LE value is based on the area of mineral soils only within an evaluation unit; organic soils are assigned a zero value. The impact of this is evident in the vicinity of major organic deposits (e.g. the marshes) where the LE value is lower because the EU contains areas of organic as well as mineral soils. Part of the LE Methodology included conducting on-site validation of the computed LE values for the grids and associated soil capability ratings by roadside observation, supplemented by aerial photography and digital elevation data. Predicted LE ratings were modified to reflect on-site observations.

The Area Review criteria to be used in the York LEAR study were determined by the Steering Committee to be fragmentation, lands in production, and conflicting land use. Although numerous other AR criteria were considered for the York LEAR, these three were selected because they cover a cross-section of important non-soil factors that influence agriculture in this Region. In addition, assessment of these criteria was feasible using currently available data and existing GIS techniques. Section 5 describes how these criteria were extracted from the data and combined into one AR factor using GIS techniques.

4 Data Sources and Correction

4.1 Municipal Property Assessment Corporation (MPAC) Data

The Municipal Property Assessment Corporation is an independent body established following the Ontario Property Assessment Corporation Act in 1997. It is a not-for-profit corporation whose responsibility is to provide property assessments in Ontario mainly for the preparation of annual assessment rolls used by municipalities to calculate property taxes. MPAC classifies and values properties in Ontario by continually collecting and updating detailed information for every property in Ontario. This involves information collection from land title documents, building permits, real estate boards, on-site property inspections, and communication with property owners. In the York Region Area Review, MPAC data was utilized to provide data for all three AR factors. For fragmentation, MPAC parcel fabric was used to determine the level of fragmentation within each evaluation unit. For conflicting land use, MPAC database information was queried according to its assigned MPAC property code. For lands in production, MPAC data was queried using a specific farm property code determined by MPAC. This code contains information regarding the type of farming occurring on that parcel of land. Due to the fact that crops change frequently, MPAC data was used as a baseline and a series of refinements were conducted using input from local farmers and planners familiar with specific areas. The input from the farmers was also important to differentiate between land not in production and pasture land or land lying fallow as part of the normal crop rotation.

5 YORK Region LEAR Methodology

This section outlines the LEAR approach implemented for York Region. Presented first is the LEAR workflow, followed by criteria descriptions and finally a set of more detailed processing steps. The designed approach considers previous LEAR research, issues identified by the Steering Committee and certain limitations with regard to data availability.

5.1 Workflow

Figure 5.1 – YORK Region LEAR Workflow

5.2 Criteria Descriptions

In conducting a LEAR for York Region, four criteria were used including CLI Soil Rating, Fragmentation, Lands in Production, and Conflicting Land Use (within 1 km of the EU). These criteria were adopted by the Steering Committee and covered the necessary soil and non-soil related factors to evaluate the York agricultural land base. Each criterion is explained in more detail below.

1) *CLI Rating*

The Canada Land Inventory (CLI) system combines attributes of the soil to place the soils into a seven-class system of land use capabilities. The CLI system groups mineral soils according to their potential and limitations for agricultural use. The first three classes are considered capable of sustained production of common field crops, the fourth is marginal for sustained agriculture, the fifth is capable for use of permanent pasture and hay, the sixth for wild pasture and the seventh class is for soils or landforms incapable for use for arable culture or permanent pasture. As previously discussed, organic or muck soils are not classified under this system.

The Soil Research Group utilized recently updated agricultural soil capability classes (Canada Land Inventory (CLI) from OMAFRA in digital format. Land Evaluation scores for each evaluation unit were determined by assigning points to each CLI class and multiplying them by the proportion that each CLI class occupies within an evaluation unit. The overall LE score (ranging from 0-10) for each evaluation unit was then confirmed by roadside observation and corrected when observed errors significantly affected the score of an evaluation unit.

2) *Fragmentation*

Fragmentation describes the extent that land in each Evaluation Unit has been divided into smaller units and is illustrated schematically in Figure 5.2 following. As a general observation the greater the number of parcels within an evaluation unit, the lower the AR score as smaller parcels are generally indicative of non agricultural uses, such as rural residential development, which can limit the use

and sustainability of remaining large parcels for many forms of agriculture. The LEAR methodology counts the number of discrete parcels in each Evaluation Unit to provide a measure of fragmentation.

Figure 5.2 – Schematic Illustration of Fragmentation

In York, the Fragmentation scoring was as follows:

0 - 5 parcels in an EU received 10 points

6-10 parcels receive 8 points

11-15 parcels receive 6 points,

16-20 parcels receive 4 points, and

Over 20 parcels receive 2 points

In the example in **Figure 5.2**, there are 17 distinct property parcels (excluding the road) inside the Evaluation Unit. Therefore in this example the Evaluation Unit receives a fragmentation count of 17 and consequently a score of 4 points based on that count.

3) *Lands Under Production*

Nearby lands currently under production is an important factor for farming in York Region as it ensures that a contiguous mass of farm production and community exists on adjacent and abutting parcels. As noted earlier farmer members of the Steering Committee assisted in identifying issues with MPAC data and confirming the most up to date data on extent and type of production on parcels in the immediate area of their farms. This was particularly important to differentiate between land not in production, pasture land and land that was lying fallow as part of the process of crop rotation.

Figure 5.3, below, illustrates how this factor was calculated. In measuring this factor a production layer was created (green) which identifies all lands currently

under production in York Region. Each Evaluation Unit was then buffered to a distance of 1km (dark blue) and all productive land area within this buffer was measured and a score applied.

Figure 5.3 – Schematic Illustration of Lands Under Production

Evaluation units that have:

801-1442 Hectares of land within 1km received 10 points

601-800 Hectares of land within 1km received 8 points

401-600 Hectares of land within 1km received 6 points

201-400 Hectares of land within 1km received 4 points

0-200 Hectares of land within 1km received 2 points

4) Conflicting Land Use (within 1 km)

Conflicting land uses have the potential to encroach on agricultural land or inhibit agricultural activities over time. Conflicting uses were defined based on assessment codes and classification of uses in the Guideline to Agricultural Land Uses. This Guideline is prepared by the province for use in establishing minimum distance separation from agricultural uses. Examples of conflicting uses include residential development, retail uses and certain forms of recreational activity. A list of the uses used in the evaluation and the weight assigned to them is included as **Appendix A** to this report.

In areas with rapid population growth certain agricultural areas may have a considerable amount of conflicting land uses within close proximity. The LEAR methodology counts the number of conflicting land uses within 1 kilometre of each Evaluation Unit boundary. **Figure 5.4** below, illustrates how the conflicting count is calculated. The conflict count is measured inside and outside of the evaluation unit. Orange property parcels represent a Minimum Distance Separation Formulae² (MDS) Class A conflict and account for only 0.5 in the conflict count. Red property parcels represent an MDS Class B conflict and account for a full 1.0 conflict count. In the example below there are 23 orange parcels inside the 1km buffer (23x0.5=11.5). In addition, there are 25 red parcels (25x1.0=25). The total conflict count in the example is therefore 36.5 (A+B).

Figure 5.4 – Schematic Illustration of Conflicting Land Use

Evaluation units that have:

- 0-50 Conflicts within 1km received 10 points
- 51-100 Conflicts within 1km received 8 points
- 101-150 Conflicts within 1km received 6 points
- 151-200 Conflicts within 1km received 4 points
- 200-716 Conflicts within 1km received 2 points

² OMAFRA, MDS Minimum Distance Separation (MDS) Formulae Implementation Guide, Publication 707

Conflicting land use property codes³ were selected by Regional and local municipal representatives with input from PLANSCAPE, and confirmed by the Steering Committee. Conflicting land uses were those uses which generally result in complaints, impede the ability to farm or limit normal farms practices, on adjacent lands. Such uses also place increased pressure on rural land and water resources and increase traffic flow on rural roads inhibiting the movement of farm machinery between fields. In York Region, the most frequent conflicting land use code was single family detached residential (MPAC code 301) at a count of 9,465. Counts of all conflicting land uses are illustrated in **Table 5.6**.

Table 5.6 – Count of all Conflicting Land Uses in York Region

301	Single family detached (not on water)	9,465
302	More than one structure used for residential purposes with at least one of the structures occupied permanently	151
303	Residence with a commercial unit	22
304	Residence with a commercial/ industrial use building	44
305	Link home – are homes linked together at the footing or foundation by a wall above or below grade.	14
309	Freehold Townhouse/Row house – more than two units in a row with separate ownership	24
311	Semi-detached residential – two residential homes sharing a common center wall with separate ownership.	18
322	Semi-detached residence with both units under one ownership – two residential homes sharing a common center wall.	20
332	Typically a Duplex – residential structure with two self-contained units.	31
333	Residential property with three self-contained units	5
334	Residential property with four self-contained units	3
365	Group Home as defined in Claus 240(1) of the <i>Municipal Act, 2001</i> – a residence licensed or funded under a federal or provincial statute for the accommodation of three to ten persons, exclusive of staff, living under supervision in a single housekeeping unit and who, by reason of their emotional, mental, social or physical condition or legal status, require a group living arrangement for their well being.	11
370	Residential Condominium Unit	8
383	Bed and breakfast establishment	0
400	Small Office building (generally single tenant or owner occupied under 7,500 s.f.)	9
402	Small Medical/dental building (generally single tenant or owner occupied under 7,500 s.f.)	3
405	Office use converted from house	7
411	Restaurant - conventional	2
450	Motel	4
625	Nursing home	2
627	Other health care facility	0

700	Place of worship - with a clergy residence	13
701	Place of Worship - without a clergy residence	47
710	Recreational sport club - non commercial (excludes golf clubs and ski resorts)	11

As defined in the Region of York Official Plan (2006 Office Consolidation), the system of settlement areas consists of lands designated as Urban Areas, Towns and Villages and Hamlets (except on the Oak Ridges Moraine, these are designated in local municipal official plans). In the York LEAR study, settlement areas and their potential impact or shadow on nearby agricultural uses were removed from the conflicting land use calculation. The masking of settlement areas is a standard method used in LEAR studies to limit the shadow effect of settlement areas which dramatically reduce scores for nearby agricultural land and create a pronounced “doughnut” effect (of low scores) surrounding each settlement. As a result, all settlement areas designated in the Regional or local plans were taken out of the calculation and these boundaries were treated as a “wall”. When considering the results of the LEAR, local and regional planners are aware of this approach and factor it into consideration of land use designations.

Conflicting land uses external to the York boundary were also excluded from the conflicting land use calculation. Acquisition of MPAC data for Durham, Simcoe and Peel Region proved to be too difficult for the scope of the York study. As a result, the boundary of York Region acts as a “wall” in the conflicting land use calculation. However, to inform the process, a windshield survey was conducted to assess neighbouring agricultural uses. Through this process it was determined that significant agricultural production occurs along the Durham Region boundary to the north and south of the Moraine. Within the Moraine in Durham Region, while agriculture predominates in many areas, the topography limits and defines the areas of production and non-farm development. Along the Peel Region boundary, lands south of the Moraine are largely designated for urban uses. On the Moraine and north of the Moraine, extensive areas of mixed agriculture and large lot residential development occur. Simcoe County, along the northern boundary of the Region, exhibited many of the same land uses characteristics as northern Peel Region with extensive areas of mixed agriculture and large lot residential development outside of the Simcoe County portion of the Holland Marsh Specialty Crop Area. The presence of settlements and neighbouring land

use patterns were factors considered when local and Regional planners reviewed the final LEAR results as input to establishing and confirming agricultural and rural policy areas for the Regional Official Plan update.

5.3 Land Evaluation Procedure

The Soil Resource Group employed the methodology proposed by OMAFRA, 2002 to determine LE values for each unit of evaluation (lot and concession). Outlined below are the steps required to complete the Land Evaluation for YORK.

- a) Review available materials (Greenbelt LEAR, soils report and CLI classifications) for the study area and confirm with LEAR Steering Committee;
- b) From the York soils map, determine each soil series that is located within the boundary of the evaluation unit;
- c) Determine the CLI rating for common field crops for each soil map unit in each evaluation unit;
- d) Calculate the proportion of the total area of the EU occupied by each soil series, and hence each CLI rating for the series;
- e) Determine the proportion of land in the EU in each of the 7 CLI classes by summing the area within each class;
- f) Assign a point value to each CLI class (Points assigned to CLI class 1,2,3,4,5,6,7 and organic soils were 10, 8.0, 6.5, 5.5, 5.0, 4.0 and 0 respectively, OMAFRA, 2002);
- g) Multiply the point value by the proportion of EU occupied for each CLI class for LE (LE scores will range from 0 to 10);
- h) Conduct on-site validation of the soil capability class mapping and associated computed LE values by roadside observation with the assistance of aerial photography;
- i) Determine if soil and CLI classifications, as identified on existing soil and land capability maps, were accurate; and,

- j) Identify any potentially limiting or enhancing soil capability factors not indicated on existing maps or in databases as being present within the parcels and update or modify the database as required.

The LE scores for each evaluation unit are attached as **Appendix B** and shown on Map 2 of this report.

5.4 Area Review Procedure

PLANSCAPE completed the Area Review for the York LEAR using a methodology based on previous LEAR studies, advice from OMAFRA, and input from the York Region LEAR Steering Committee. The steps taken by PLANSCAPE are outlined below.

- a) Review all applicable research including previous LEAR studies;
- b) Select appropriate Area Review factors for York Region that were attainable from a data acquisition perspective and confirm with LEAR Steering Committee;
- c) Acquire spatial data for the Area Review including: lot/concession polygons to be used as evaluation units and MPAC parcel polygons for fragmentation, lands in production, and conflicting land use calculations;
- d) Fragmentation - Perform count of ownership parcels for each Evaluation Unit using manual methods (as GIS operations often perform a double count);
- e) Lands in Production - Query farm property codes to find parcels that are in production. Receive edits from farmers and planners. Create new 'production layer. Use GIS proximity operations to calculate area of productive lands within 1km of each evaluation unit;
- f) Conflicting Land Use – Query property codes to find all conflicting parcels. Create new 'conflicting' layer. Use GIS proximity operations to calculate a count of conflicting parcels within 1km of each evaluation unit; and,
- g) Assign scores for each AR factor (scoring illustrated in Figure 5.1).

The AR scores for each evaluation unit are attached as Appendix B and shown on Map 3 (AR), 3a (Fragmentation), 3b (Production) and 3c (Conflicting) of this report.

5.5 LE and AR Integration and Mapping

All derived layers of the LEAR were integrated together by PLANSCAPE in a GIS environment. The LE (soils) component weight of 65% was determined by the Steering Committee as previously discussed in this report. Each AR criteria was weighted equally at 11.7% percent for a combined AR weighting of 35%. The output from the weighted overlay operation resulted in a final layer showing LEAR scores on a scale of zero to ten.

Figure 5.7 – Schematic Illustration of Integration of Factors

Using these scores of 1 to 10, the next step was to establish a threshold score, for differentiating between prime and non prime agricultural land. The Provincial LEAR methodology states that values between 5.0 to 6.5 are appropriate at thresholds. Recent LEAR studies conducted in other jurisdictions have used a threshold of 6.0. The Provincial LEAR undertaken for the Greenbelt also used a threshold of 6.0. For the York LEAR, a threshold score of 6.0 was chosen based on discussions with the Province, the agricultural advisory group and Regional and local planning representatives. Testing of this threshold value, using the Canada Land Inventory and evaluations done previously using different approaches, confirmed that the threshold of 6 differentiated between lands that had been designated prime in the past and did not include areas of marginal class 5 to 7 land. A sample calculation for an Evaluation Unit is outlined below:

- Class 3 soils (LE score of 6.5);
- 500ha of productive lands within 1km (AR1 score of 6.0);
- 75 conflicting land uses within 1km (AR2 score of 8.0 score); and
- Fragmented into 18 parcels (AR3 score of 4.0)

The three AR scores are combined and then multiplied by .35 since the AR score only represents 35% of the final score.

The AR score is multiplied by .65 since it accounts for 65% of the final score.

Finally the LE score (0.65×6.5) is added to the AR Score ($((6+8+4) \times 0.35)$) for a final LEAR score of 6.3. Because the score is over the threshold value of 6, this evaluation unit is deemed to be prime agricultural lands in York Region.

6 LEAR RESULTS

This section illustrates and describes the resulting maps from the YORK Region LEAR study, including the final Land Evaluation, Area Review, Fragmentation, Infrastructure, Conflicting Land Use and LEAR maps.

6.1 Land Evaluation Results

Map 2 illustrates the York Region Land Evaluation scores based on soil suitability for agriculture from the Canada Land Inventory Soil Capability Classification for Agriculture. The map clearly shows that highly favorable soil conditions exist for agriculture in northern Vaughan, north and eastern Markham, southern Whitchurch-Stouffville, northeastern Richmond Hill, western East Gwillimbury, central and eastern Georgina, and all areas excluding a large central portion of King.

6.2 Area Review Results

Maps 3A to 3C show the results for each Area Review factor. These factors incorporate important non-soil factors that may enhance or impede agricultural activities. **Map 3A** illustrates fragmentation scoring for York Region. The results indicate that fragmentation occurs throughout York at varying levels, **Map 3B** displays the York Region Production map. Prominent pockets of production include: north Markham, southern Whitchurch-Stouffville, central and northwestern East Gwillimbury, central and west Georgina, widespread areas in King excluding the central portion and north Vaughan. **Map 3C** illustrates scores for Conflicting Land Use in York Region. Areas of higher conflict in York Region include central Whitchurch-Stouffville, northern Georgina, central King and areas on the urban fringe in Vaughan. **Map 3** integrates the results of each AR factor

into one overall Area Review Map. These results show that York Region is generally well suited to agriculture from a non-soils perspective with the exception of central King, portions of Whitchurch-Stouffville and northern and eastern Georgina.

6.3 LEAR Results

Map 1 illustrates the overall York Region LEAR map. This map integrates the Land Evaluation and Area Review into one map showing an overall score for each Evaluation Unit in the study area. The final LEAR map clearly shows high scoring across all of York Region with the exception of a few pockets of weak scoring areas. These low scoring pockets include those in southeastern Georgina, northeastern East Gwillimbury, the northern half of Whitchurch-Stouffville and central King.

6.4 Agricultural Profile

Once completed the LEAR was used to inform the process of establishing proposed prime and rural land use designations. To provide additional insight into the evolving nature of agriculture in York, a profile of agriculture (based on Statistics Canada census data) was prepared. The profile provides a brief snapshot of York Region agriculture and summarizes trends related to gross farm receipts, farms and farmland, land tenure, types of production, and farm operators.

Gross Farm Receipts

Agriculture in the Regional Municipality of York provides a significant contribution to the local and provincial economy. As illustrated in **Figure 6.1**, York generated approximately \$224 million in total gross farm receipts in 2006. This total was produced on approximately 167,000 acres of land, resulting in gross farm receipts of \$1,341 per acre. This per acre amount ranks eighth in Ontario for regional municipalities and confirms both the financial significance and the productivity of the agricultural lands of York .

Figure 6.1 indicates a total gross farm receipts value of approximately \$689 million for the Greater Toronto Area. Gross farm receipts from York contribute approximately one third of this total, making York a critical component of the agriculture sector in the GTA.

Figure 6.1 - Ranking by County, District and Municipality of Total Gross Farm Receipts Per Acre, 2006

Rank	Geographic Location	Gross Farm Receipts (\$)	Farmland Acres	Gross Farm Receipts Per Acre (\$)
1	Regional Municipality of Niagara	671,680,773	231,728	2,898.57
2	Essex County	663,101,507	329,776	2,010.76

Source: Statistics Canada, Census of Agriculture, 2006

Since 2001, the gross farm receipts generated in the Regional Municipality of York have increased significantly. As shown in **Figure 6.2**, the Region had approximately \$179 million in gross farm receipts in 2001, which increased to approximately \$224 million in 2006, an increase of 25 percent.

Figure 6.2 - Total Gross Farm Receipts Per Acre, 2006

Geographic Location	Gross Farm Receipts (\$)		Percentage of Change
	2001	2006	
Ontario	\$9,115,454,790	\$10,342,031,229	13.5%

Farms and Farmland

In most parts of the province, especially in the Golden Horseshoe, the number of farms has been in continual decline for decades. As illustrated in **Figure 6.3**, virtually all areas in the GTA have seen a significant reduction in the number of farms since 1981. Among these, the Regional Municipality of York has had the largest drop, at -45.3% from 1981 to 2001. However, **Figure 6.4** reveals a moderate decline more recently with an overall reduction of 48 farms in York Region from 2001 to 2006.

Figure 6.3 - Number of Farms in Ontario, Surrounding GTA, and the GTA (Percentage Change) 1981 to 2006

Geographic Location	Number of Farms						Percentage Change	
	1981	1986	1991	1996	2001	2006	1981 - 2001	2001 - 2006
Ontario	82,448	72,713	68,633	67,520	59,728	57,211	-27.6%	-4.2%
Surrounding GTA	13,016	11,611	10,988	10,926	9,623	9,426	-26.1%	-2.0%

Source: Statistics Canada, Census of Agriculture, 1981, 1986, 1991, 1996, 2001 and 2006

Figure 6.5 shows how the recent decrease in farms (2001 to 2006) is spread across local municipalities within York. Markham, Whitchurch-Stouffville and East Gwillimbury all show significant declines in the number of farms. However, one interesting anomaly to this trend is Vaughan which has actually seen an increase in 24 farms since 2001, an increase of 20.7 percent.

Figure 6.5 - Number of Farms in the Regional Municipality of York by Area Municipality 2001 to 2006

Geographic Location	Number of Farms		Change 2001-2006	
	2001	2006	Number of Farms	Percent
Regional Municipality of York	1,020	972	-48	-4.7%
Vaughan	116	140	24	20.7%
Richmond Hill	32	27	-5	-15.6%
Markham	85	64	-21	-24.7%
King	289	293	4	1.4%
Whitchurch-Stouffville	178	159	-19	-10.7%

Similar to number of farms, the province, and Golden Horseshoe have encountered steady declines in farmland area since 1981. For the GTA, **Figure 6.5** indicates a significant decline of 179,000 acres from 1981 to 2001 (-20.1%) and a further decline of approximately 31,000 acres since 2001 (-4.4%). During this time, the Regional Municipality of York has undergone an even higher rate of decline, approximately 29 % from 1981 to 2001 and an additional 5 % decline from 2001 to 2006. **Figure 6.6** illustrates this trend.

Figure 6.6 - Farmland Area in Ontario, Surrounding GTA and the GTA by Area Municipality (Percentage Change), 1981 to 2006

Geographic Location	Farmland Acres						Change in Farmland Area (Acres)		Percentage Change

Figure 6.6 - Farmland Area in the Regional Municipality of York, 1981 - 2006

Source: Statistics Canada, Census of Agriculture, 1981, 1986, 1991, 1996, 2001 and 2006

Due to the trend of farm amalgamation, the decline in number of farms over time is often higher than the decline in farmland acres. However, in York the recent decline (2001 to 2006) in number of farms was 4.7 percent, while farmland decreased 5.1 percent. Farm amalgamation does not appear to be as significant a factor in York, as it is in other parts of Ontario and Canada. This may be due to the nature of agriculture in York which is dominated by vegetable and greenhouse production; types of production that can occur profitably on smaller acreages.

Within the Regional Municipality of York, Markham and Georgina have experienced the largest loss in farmland from 2001 to 2006. As shown on **Figure 6.8**, Markham has lost over 12,000 acres and Georgina 4,000 acres. This decline in farmland acres can be attributed to a number of factors including pressure from urban development, urban expansions, uncertain commodity prices, termination of rental agreements or retirements.

Figure 6.8 - Farmland Area in the Regional Municipality of York by Area Municipality, 2001 to 2006

Geographic Location	Farmland Area (Acres)		Change 2001-2006	
	2001	2006	Farmland Area (Acres)	Percent
Regional Municipality of York	175,965	167,076	-8,889	-5.1%

Georgina	33,663	29,663	-4,000	-11.9%

Source: Statistics Canada, Census of Agriculture, 2001 and 2006

Figure 6.9 shows the distribution of farmland area in each local municipality as a percentage of the York total in 2006. King and Georgina contain the largest amount of farmland, collectively making up almost half of the Regions agricultural land.

Figure 6.9 - Farmland Area Breakdown in the Regional Municipality of York, 2006

Source: Statistics Canada, Census of Agriculture, 2006

Figure 6.10 displays average farm sizes within the Regional Municipality of York. Richmond Hill has the largest farms, while Vaughan has the smallest. The smaller average farm size in King will be in part due to the Holland Marsh which is characterized by smaller operations. Average farm size tends to vary based on the type of production with cash crop operations occupying large acreage and high value per acre commodities such as fruit, greenhouse, nursery and vegetable occupying smaller acreages.

Figure 6.10 - Average Farm Size in the Regional Municipality of York by Area Municipality, 2006

Source: Statistics Canada, Census of Agriculture, 2006

Tenure

The rates of rented, leased and crop shared lands is high in the GTA and even higher in the Regional Municipality of York. **Figure 6.13** indicates that leased land peaked at approximately 57% in York Region in 2001. In 2006 the rate had declined to 48%.

Figure 6.11 - Percentage of Farmland Rented, Leased or Crop Shared in the Regional Municipality of York, GTA, and Ontario 1991 to 2006

Geographic Location	1991	1996	2001	2006
Regional Municipality of York	51.70%	55.50%	57.30%	48.20%
GTA	43.30%	46.90%	46.90%	43.00%
Ontario	26.60%	29.60%	30.60%	27.80%

Source: Statistics Canada, Census of Agriculture, 1991, 1996, 2001, 2006

Figure 6.12 illustrates rates of rented, leased or crop shared lands as mentioned above. During the ten year period between 1991 to 2001, a similar gradual increase in leased land was evident in Ontario, the GTA and the Regional Municipality of York. After 2001, it is apparent that the Regional Municipality of York experienced a more pronounced decline in rental rates, a drop of approximately 9 percent.

Figure 6.12 - Percentage of Farmland Rented, Leased or Crop Shared in the Regional Municipality of York, 2006

Source: Statistics Canada, Census of Agriculture, 2006

Within the Regional Municipality of York, the majority of local municipalities exhibit a similar level of leasing with the exception of Markham. **Figure 6.13** demonstrates that in 2006 Markham had a rented, leased or crop-shared rate of 74 percent, and very little

land was owned by the farmer (26 percent). This is reflective of the high public ownership of rural land in Markham. Much of this land is rented back to farmers.

Production Profile

Figure 6.14 summarizes the number of farms by farm type in the Regional Municipality of York and Area Municipalities in 2006. The type of farm that is most numerous in York is Miscellaneous Specialty at 395 farms. Miscellaneous Specialty is composed of sheep and lamb, horse and pony, specialty livestock, mushroom, greenhouse product, and nursery product and sod. The horse sector has always been an important element of the agricultural sector in York.

Figure 6.14 - Number of Farms by Farm Type and Total Gross Farm Receipts for the Regional Municipality of York, 2006

Starting in 1986, for confidentiality reasons, Statistics Canada began to amalgamate farm information into adjoining area municipalities (Aurora/Newmarket into Richmond Hill; City of Toronto into Vaughan; and Ajax into Whitby).
Source: Statistics Canada, Census of Agriculture, 2006

The breakdown of type of farm by number in York is depicted in **Figure 6.5**. Already mentioned is the large number of miscellaneous specialty farms but also of note is the large presence of Cattle, Vegetable, Grains and Oilseeds and Field Crop farms, which combined form approximately half of all farms. Although number of farms does give an

indication of the composition of the farming community in York, the breakdown of farms by Gross Farm Receipts is perhaps a better measure regarding productivity and which crops are the most significant for the Region.

Figure 6.15 - Number of Farms by Farm Type for the Regional Municipality of York, 2006

Source: Statistics Canada, Census of Agriculture, 2006

The change in farm operations from 2001 to 2006 is displayed in **Figure 6.16**. The most significant trend is the decrease in cattle farms. To a lesser extent, dairy, hog, poultry and egg, and grains and oilseeds also experienced reductions. The graph also shows a clear increase in the number of miscellaneous specialty farms and fruit farms in the York.

Figure 6.16 - Number of Farms by Farm Type, the Regional Municipality of York, 2001 & 2006

Source: Statistics Canada, Census of Agriculture, 2001, 2006

Figure 6.17 presents a table of the breakdown of the commodity profile.

10	Oilseed - 2.3%	Vegetable - 1.7%	Nursery Product & Sod - 2.4%	Corn for Grain - 1.7%	Hog - 2.0%

For the purposes of this table Miscellaneous Specialty has been broken down into: Horse & Pony, Mushroom, Greenhouse Product and Nursery Product & Sod. None of the remaining commodities in this grouping are significant in the GTA.
For the purposes of this table Grains & Oilseeds has been broken down into: Oilseed, Corn for Grain, and Other Small Grain. None of the remaining commodities in this grouping are significant in the GTA.

Note: Data for number of farms is calculated on All Farms reporting.

Source: Statistics Canada - 2006 Gross Farm Receipts - All Farms Reporting

In York Region, the production profile is dominated by high value, small acreage production. As displayed in Figure 6.18, Vegetable, Greenhouse Products and Horse and Pony dominate in terms of gross farm receipts. This in part will be due to the fact that a large portion of the Holland Marsh is in York and to the large horse sector that is found in the Region. The horse sector generates high returns, especially in the municipalities of King, Richmond Hill and Vaughan. Due to the nature of this sector, the horse and pony sector tends to have a significant stimulatory impact on local agricultural economies.

Farm Operators

Apart from a slightly lower average age, the farm operator profile in York is similar to that of the profile in other GTA regions. The number of male operators is declining; the number of female operators is rising. However for operations generating in excess of \$250,000, the age profile changes slightly. The average age of operators in the higher categories is younger. It is this category of operation that is also experiencing growth. Despite a decline in absolute number of farms between 2001 and 2006, the number of operations generating in excess of \$250,000 increased in 2006 while the number of operations in the lower categories declined.

Figure 6.21 - Characteristics of Farm Operators for Ontario, the GTA and by Regional Municipality, 2001 and 2006

Geographic Location	Number of Operators		Gender				Average Age of Operators	
			Male		Female			
	2001	2006	2001	2006	2001	2006	2001	2006
Ontario	85,015	82,410	62,210	58,875	22,800	23,530	50.7	52.6

Source: Statistics Canada Census of Agriculture, 2001, 2006

Figure 6.22 - Average Age of Farm Operators for Ontario, the GTA and by Regional Municipality, 2001 and 2006

This profile of agriculture in York confirms that it is experiencing many of the trends that are evident in other parts of Ontario. The number of farms is declining and the average age of operators is rising. Despite this, gross farm receipts are also rising and the number of larger operations, based on gross farm receipts generated, is increasing. The age profile for operators of larger valued operations is lower. In York, as in other GTA regions the production profile is shifting slightly to vegetable, greenhouse, fruit and nursery production.

York also exhibits some differences from the regional and provincial profile. The rate of decline in area of farmland is higher than the decline in number of farms. This may be reflective of the types of farms which are prevalent in York including horse, vegetable and greenhouse. These types of operations tend to be smaller in area with much higher per acre production values.

7 Summary, Conclusions and Observations

7.1 York LEAR

The overall conclusion of the LEAR assessment is that York Region contains a significant amount of prime agricultural land as defined in the PPS. Therefore in developing planning policies to manage growth into the future the Region must consider protection and support for the agricultural sector.

7.2 State of the Industry

The profile provided in the previous section, identified a number of interesting trends that are occurring in the agricultural sector in York. While there continues to be a decline in number of farms and area of farmland, the percentage decline is decreasing and actually leveled off in the period from 2001 to 2006. This will in part be due to the establishment of the Greenbelt, revisions to the PPS and enactment of the Oak Ridges Moraine Conservation Plan and Places to Grow – The Growth Plan for the Greater Golden Horseshoe. These initiatives have tightened the controls on land use. As regional and municipal plans are brought into conformity with these provincial policies, the certainty required to allow agriculture to prosper will be reinforced and should help stabilize the industry. While speculation on future land use will always be a factor, introduction of these provincial policies has provided greater certainty about the future for farmers. The decline in rental rates for agricultural lands which was significant in York between 2001 and 2006 may in part be in response to this greater certainty.

The production profile in York is focused on the type of production that supports the recent trends to local food. Vegetable, greenhouse, and cattle production, all of which cater to the local food movement, rank first, second and fourth in value in the commodity profile. The superior quality of the land in York, as confirmed in the LEAR evaluation, the presence of one of the two designated specialty crop areas in the Province, the Holland Marsh, and the proximity to the large GTA market area, means that York has the potential to sustain and expand their important contribution to the local food market and to food security.

The horse and pony sector has always been dominant in York and continues to be a significant part of the agricultural profile. The high value of this sector and its demand for inputs, contributes significantly to the regional economy.

Financially, the agricultural sector makes a significant contribution to the Regional economy. Despite a decrease in farmland between 2001 and 2006, gross farm receipts increased by 25%, from \$179 million to \$224 million. The gross farm receipts per acre in 2006 were significantly higher in York than in Ontario or the GTA as a whole. Even when costs are factored in, net revenue per acre was \$179 per acre in York as compared to \$113 in Ontario, or \$136 in the GTA.

Despite a decline in the number of farms between 2001 and 2006, there was an increase in the number of operations generating in excess of \$250,000 in gross farm receipts per year. It was the lower economic categories that experienced a decline in numbers or operations. With respect to average age, although the average age is rising, it is considerably lower in the more profitable economic categories.

7.3 Farm Operators

The farm community, as represented by the York Federation of Agriculture and the York Agricultural Advisory Liaison Group, participated actively in the conducting the LEAR assessment. The message brought to the Region by this group is that the farm community as it exists today is a resilient group which has adjusted to the challenges of farming in the GTA. They have accepted the requirements of dealing with non-farm residents, appreciate the availability of rental land to manage their output and are benefiting from the proximity of a large urban market. Despite the older average age profile reported by Statistics Canada there are younger operators in the area who expect to have a future in farming in the Region if circumstances are supportive. They are willing to work with the Region and the municipalities to ensure that these conditions, which include certainty, access to land and rigorous enforcement of the right to farm, are in place. Currently, in addition to the York Federation and the YAALG, York farmers are part of many other organizations including the Greater Toronto Area Agricultural Action Committee and the Holland Marsh Growers' Association which are working actively to protect and promote agriculture in York and the GTA.

7.4 Competing Land Uses

Despite population growth over the past 20 years, York has protected agricultural lands with policies in the regional and local official plans. As a result the Region continues to have large areas in agricultural production and high quality soils in many locations including lands outside of the Greenbelt and ORMCP where pressures for urban expansions are greatest.

The LEAR evaluation and the profile of agriculture have confirmed that York is home to a significant area of prime agricultural land and a resilient and productive farm community. It is appropriate that both the regional and local official plans continue to protect the agricultural resource. However, York is also designated to accommodate a significant amount of growth under Places to Grow – the Growth Plan for the Greater Golden Horseshoe. This growth must be accommodated in the areas outside of the Greenbelt and the ORMCP, many of which are comprised of prime agricultural land. In determining how to accommodate this growth the Region and the local municipalities must balance off many other considerations including natural heritage values, servicing infrastructure, transportation corridors and efficient and compact urban form. In doing so it is inevitable that certain agricultural lands will be re-designated for urban growth. However in doing so, the results of this study should assist in determining where and how the conversion will occur to minimize the impact on the agricultural sector.

7.5 Conclusions and Recommendations

York has always recognized the benefit to both the regional economy and the well being of Regional residents, of having a productive and sustainable agriculture sector. With the growing concerns about environmental sustainability and food security this commitment to maintaining agriculture as a vital and vibrant part of the Region should be confirmed.

The LEAR assessment is a tool for use in identifying and managing the agricultural resource in the Region. It should be used by regional and local planners to inform planning decisions and assist in identifying agriculture and rural lands in the Region.

The LEAR assessment deals only with mineral soils. It does not address muck soils or consider specialty crop areas. Given that York is home to the largest concentration of productive muck soils in Ontario and that the quality of the agricultural resource may

support “specialty crop areas” as defined in the PPS, consideration should be given to working with the province and farm organizations to conduct evaluations of these potential resources.

The Region is obligated to accept a certain amount of growth under the Provincial Growth Plan. The vast majority of this growth will be directed to existing urban areas which includes intensification areas with some growth going to the “white belt areas” outside the Greenbelt and the Oak Ridges Moraine. However not all of the “white belt” area will be required prior to 2031 and even the area designated for growth prior to 2031, may not be required immediately. In the interim, the Region should support the agricultural industry with policies in the Regional Official Plan to encourage local food production, support agriculture and create circumstances that will maintain agriculture in the white belt until such time as the land is required for urban expansion. For areas protected as part of the Greenbelt or the ORM, the Region should continue to monitor the effectiveness of regional and local official plan policies to ensure they support a healthy agricultural industry, while designating agricultural lands in these Provincial Plan areas.

Appendix A – Definitions of Parcels Considered Conflicting

Property Code	Property Description	Conflict Type
101	Second tier vacant lot – refers to location not being directly on the water but one row back from the water	A
102	Conservation Authority land	N
103	Municipal park (excludes Provincial parks, Federal parks, campgrounds)	A
105	Vacant commercial land	A
106	Vacant industrial land	A
107	Provincial park	B
110	Vacant residential/recreational land on water	A
120	Water lot (entirely under water)	N
125	Residential development land	B
127	Townhouse block - freehold units	B
130	Non-buildable land (walkways, buffer/berm, storm water management pond,etc)	N
134	Land designated and zoned for open space	N
140	Common land	N
169	Vacant land condominium (residential)-defined land that's described by a condominium plan	B
200	Farm property without any buildings/structures	N
201	Farm with residence - with or without secondary structures; no farm outbuildings	N
210	Farm without residence - with secondary structures; with farm outbuildings	N
211	Farm with residence - with or without secondary structures; with farm outbuildings	N
220	Farm without residence - with commercial/industrial operation	N
221	Farm with residence - with commercial/industrial operation	N
222	Farm with a winery	N
228	Farm with gravel pit	N
231	Intensive farm operation - with residence	N
234	Large scale poultry operation	N
240	Managed forest property, vacant land not on water	N
244	Managed forest property, residence not on water	N
245	Managed forest property, residence on water	N
260	Vacant residential/commercial/ industrial land owned by a non-farmer with a portion being farmed	N
261	Land owned by a non-farmer improved with a non-farm residence with a portion being farmed	A
262	Land owned by a farmer improved with a non-farm residence with a portion being farmed	N
301	Single family detached (not on water)	B
302	More than one structure used for residential purposes with at least one of the structures occupied permanently	B
303	Residence with a commercial unit	B
304	Residence with a commercial/ industrial use building	B
305	Link home – are homes linked together at the footing or foundation by a wall above or below grade	B
309	Freehold Townhouse/Row house – more than two units in a row with separate ownership	B

Property Code	Property Description	Conflict Type
311	Semi-detached residential – two residential homes sharing a common center wall with separate ownership	B
313	Single family detached on water – year round residence	B
322	Semi-detached residence with both units under one ownership – two residential homes sharing a common center wall	B
332	Typically a Duplex – residential structure with two self-contained units	B
333	Residential property with three self-contained units	B
334	Residential property with four self-contained units	B
340	Multi-residential, with 7 or more self-contained units (excludes row-housing)	B
360	Rooming or boarding house – rental by room/bedroom , tenant(s) share a kitchen, bathroom and living quarters	B
363	House-keeping cottages - no American plan – typically a mini resort where you rent a cabin. No package plan available. All activities, meals, etc. are extra	B
365	Group Home as defined in Claus 240(1) of the <i>Municipal Act, 2001</i> – a residence licensed or funded under a federal or provincial statute for the accommodation of three to ten persons, exclusive of staff, living under supervision in a single housekeeping unit and who, by reason of their emotional, mental, social or physical condition or legal status, require a group living arrangement for their well being	B
369	Vacant land condominium (residential - improved) – condo plan registered against the land	B
370	Residential Condominium Unit	B
374	Cooperative housing - non-equity – Non-equity Co-op corporations are <u>not</u> owned by individual shareholders, the shares are often owned by groups such as unions or non-profit organizations which provide housing to the people they serve. The members who occupy the co-operative building do not hold equity in the corporation. Members are charged housing costs as a result of occupying a unit	B
380	Residential common elements condominium corporation – consists only of the common elements not units	B
391	Seasonal/recreational dwelling - first tier on water	A
392	Seasonal/recreational dwelling - second tier to water	A
395	Seasonal/recreational dwelling - not located on water	A
400	Small Office building (generally single tenant or owner occupied under 7,500 s.f.)	B
402	Large office building (generally multi - tenanted, over 7,500 s.f.)	B
405	Office use converted from house	B
406	Retail use converted from house	B
407	Retail lumber yard	A
409	Retail - one storey, generally over 10,000 s.f.	B
410	Retail - one storey, generally under 10,000 s.f.	B
411	Restaurant - conventional	B
412	Restaurant - fast food	B
415	Cinema/movie house/drive-in	B
417	Entertainment complex - with a large cinema as anchor tenant	B
419	Automotive service centre, highway - 400 series highways	A
420	Automotive fuel station with or without service facilities	A
421	Specialty automotive shop/auto repair/ collision service/car or truck wash	A
422	Auto dealership	B
423	Auto dealership - independent dealer or used vehicles	B
430	Neighbourhood shopping centre - with more than 2 stores attached, under one ownership, without anchor - generally less than 150,000 s.f.	B
450	Motel	B

Property Code	Property Description	Conflict Type
460	Resort hotel	B
465	Child and community oriented camp/resort	B
471	Retail or office with residential unit(s) above or behind - less than 10,000 s.f. gross building area (GBA), street or onsite parking, with 6 or less apartments, older downtown core	B
473	Retail with more than one non-retail use	B
477	Retail with office(s) - less than 10,000 s.f., GBA with offices above	B
478	Retail with office(s) - greater than 10,000 s.f., GBA with offices above	B
486	Campground	B
489	Driving range/golf centre - stand alone, not part of a regulation golf course	B
490	Golf course	B
492	Marina - located on waterfront - defined as a commercial facility for the maintenance, storage, service and/or sale of watercraft	B
495	Communication towers - with or without secondary communication structures	N
496	Communication buildings	N
510	Heavy manufacturing (non-automotive)	A
512	Cement/asphalt manufacturing plant	A
520	Standard industrial properties not specifically identified by other industrial Property Codes	A
523	Grain handling - Primary elevators (including feed mills)	N
530	Warehousing	N
531	Mini-warehousing	A
540	Other industrial (all other types not specifically defined)	A
558	Hydro One Transformer Station	A
560	MEU Transformer Station	A
561	Hydro One Right-of-Way	N
575	Industrial condominium	A
580	Industrial mall	A
589	Compressor station - structures and turbines used in connection with transportation and distribution of gas	N
590	Water treatment/filtration/water towers/pumping station	N
592	Dump/transfer station/incineration plant/landfill	N
593	Gravel pit, quarry, sand pit	N
594	Peat moss operation	N
597	Railway right-of-way	N
598	Railway buildings and lands described as assessable in the Assessment Act	N
599	GO transit station/rail yard	A
601	Post secondary education - university, community college, etc	B
605	School (elementary or secondary, including private)	B
608	Day Care	B
610	Other educational institution (e.g. schools for the blind, deaf, special education, training)	B
611	Other institutional residence	B
625	Nursing home	B
626	Old age/retirement home	B
700	Place of worship - with a clergy residence	B
701	Place of Worship - without a clergy residence	B

Property Code	Property Description	Conflict Type
702	Cemetery	B
710	Recreational sport club - non commercial (excludes golf clubs and ski resorts)	B
718	Exhibition grounds/fair grounds	B
721	Non-commercial sports complex	A
730	Museum and/or art gallery	B
731	Library and/or literary institutions	B
735	Assembly hall, community hall	B
736	Clubs - private, fraternal	B
744	Private airport/hangar	N
750	Scientific, pharmaceutical, medical research facility (structures predominantly other than office)	B
810	Fire Hall	B
815	Police Station	B
